Mini Project 1
By: Spencer Halford

Work was done solo, home page was done using OnMouseEnter along with useContext and useState to sync the img display on the other column.

Login is practically the same from classwork.

Username: user1
Password: test

Register uses Regex since I didn't want to import libraries or run extensive loops to check. These regex commands were gotten from various websites like stackoverflow and rexegg as I did not have time to learn how to put functions together.
